Hiring Manager

Simba Group

Kampala, Uganda

RE: Application for Biometric Officer Position (Ref: SG-VAS-UG-06-04)

Dear Hiring Manager,

I am writing to apply for the Biometric Officer position at Simba Group, as advertised. I bring hands-on experience in biometric data collection systems, customer service operations, and IT equipment management combined with fluency in English and Luganda.

I recently developed a biometric enrollment and identity verification system (UPDMS) that includes fingerprint capture via browser-based API, webcam photo acquisition, and OCR-based ID document scanning using Tesseract.js. This project required precision, attention to data security, and a workflow designed for accuracy directly aligning with the responsibilities of collecting biometric data for Visa Application Centre operations.

In my IT support and media work, I have:

- Operated and maintained technical equipment in fast-paced, customer-facing environments
- Assisted applicants and users through processes with patience and clear communication
- Managed sensitive data with strict confidentiality
- Collaborated with diverse teams across cultural backgrounds

I hold a Diploma in Information Technology from ISBAT University (final semester completed June 2026) and I am available to start immediately. I am confident that my technical background, customer service orientation, and fluency in both English and Luganda make me a strong candidate for this role.

I would welcome the opportunity to discuss how my skills can contribute to the Simba Group team. Thank you for your consideration.

Yours sincerely,

Jondu Jesse
