PROFESSIONAL SUMMARY

Creative and resourceful Junior Developer & Designer who builds functional, user-focused digital solutions using AI-assisted development workflows. Combines web development skills (HTML, CSS, JavaScript, React, PHP, Python) with graphic design and UI/UX sensibilities to rapidly prototype and ship working products. Passionate about civic tech, digital rights, and using technology to strengthen democratic processes. Experienced in building complete systems — from biometric enrollment platforms to registration portals — using modern AI tools (Claude, ChatGPT, Copilot) as force multipliers.

SKILLS & TECHNOLOGIES

AI-Assisted Development: Vibe coding with Claude, ChatGPT, GitHub Copilot — rapid prototyping, debugging, full-stack generation. Build production systems in hours, not weeks.

Frontend Development: HTML5, CSS3, JavaScript, React.js, Tailwind CSS, responsive design, accessibility basics

Backend & Databases: PHP, MySQL, Node.js, Firebase, REST API integration

Design & UI/UX: Graphic design (Canva, Photoshop), UI mockups, typography, brand identity, Figma basics

Digital Content: Social media graphics, banners, posters, video thumbnails, 100+ published designs

Tools & Workflow: Git/GitHub, VS Code, Vite, Flutter/Dart (basic), Python (Pandas, NumPy), Linux CLI

KEY PROJECTS

UPDMS — Biometric Enrollment System — Built a complete identity verification platform with fingerprint capture (browser API), webcam photo acquisition, and OCR ID scanning (Tesseract.js). Features real-time data validation, PDF report generation, and secure data handling. Built end-to-end using AI-assisted development.

Bulk SMS Platform — Developed a React + Vite web application for sending bulk SMS messages. Features include a dashboard, CSV contact upload, delivery reports, modem status monitoring, queue management, and settings panel. Built with Tailwind CSS.

Dairy Management System — Created a full-stack PHP/MySQL dairy farm management system with role-based access (worker, manager, admin). Manages animals, milk production, feeding schedules, health checks, expenses, sales, and reporting.

Registration & Check-in System — Created a digital registration and check-in platform with QR code generation, automated email confirmations, waitlist management, and real-time attendee dashboard.

Portfolio Platform — Built a personal portfolio showcasing 100+ graphic design works, projects, and client testimonials. Features dark mode, animations, search, and category filtering.

Admin Login System — Developed a PHP/MySQL user authentication system with secure registration, login/logout, and role-based access control. Features separate admin and user dashboards, password hashing, and session management.

Access Internet — Payment Portal — Built a PHP-based pay-as-you-go internet package purchasing system with Airtel Money and MTN Mobile Money integration. Displays time-based and data-based packages with real-time payment processing.

College Event Management — Designed a dual-panel HTML/CSS system with an admin dashboard for managing events and a student portal for viewing and registering. Features event listings, scheduling, and role-based views.

Data Collection Platform — Created a Firebase-powered job application data-collection form that submits applicant details (name, email, phone, position, experience) to Firestore. Features real-time data persistence and a clean responsive UI.

WORK EXPERIENCE

Freelance Developer & Designer

Jan 2024 — Present | Kampala, Uganda

- Develop web applications, landing pages, and digital systems for small businesses and non-profits
- Use AI-assisted workflows to accelerate development — reducing delivery timelines by 60%+
- Design brand identities, social media graphics, marketing collateral (100+ designs delivered)
- Manage end-to-end project delivery: requirements gathering, prototyping, development, deployment

IT Support & Systems Developer

Jan 2024 — Present | Kampala, Uganda

- Built biometric enrollment systems for identity verification projects
- Provided technical support and equipment maintenance in customer-facing environments

- Managed sensitive data with strict confidentiality protocols

EDUCATION

Bachelor of Science in Applied Information Technology (B.Sc. AIT)

ISBAT University, Kampala | Currently pursuing (2nd year completed)

Diploma in Information Technology

ISBAT University, Kampala | Jan 2023 — Jun 2026 (Completed)

WHAT SETS ME APART

- Vibe coder: I use AI as a creative partner to build, debug, and ship faster — turning ideas into working products rapidly
- Full-strain thinker: I understand both code and design — bridging the gap between how something works and how it looks
- Civic-tech minded: passionate about using technology to strengthen democracy, combat disinformation, and support civil society
- Self-taught & curious: continuously learning new tools and methodologies to stay effective
